

**Protect Your Merchandise...
Safeguard Your Employees!**

Easy Cut™

EasyCut™ System with built-in safety features provides the ultimate in protection for you and your merchandise!

Safety First!

The blade guard and trigger activation mechanism keep the blade from extending out as far as typical box cutters, reducing box cutting accidents by 50% and saving you money! *In fact, studies show that workers' compensation premiums are reduced in 18 months after introducing a safety cutter program.*

Squeeze the trigger, the blade engages. The blade automatically retracts when cut is complete, reducing risk of injury. Blade locks into position for additional safety.

With EasyCut, it takes half the strength to cut boxes, reducing stress on the hand and wrist. *Helps reduce carpal tunnel claims which can be \$20,000 to \$40,000 per hand.*

Top-load blade carriage is safer than disassembling the cutter to change the blade.

Control the blade depth. Choose from 3 precise blade settings. Match depth of cut to carton thickness. The

The EasyCut™ System includes: 1 cutter, 1 holster and 1 detachable lanyard

adjustable length blade
reduces product damage up
to 50%.

Ambidextrous—One Cutter Fits All

Unique edge guides adjust to fit left or right hand users.

Saves You Money

The handy holster with left or right hand clip and detachable stretch lanyard keeps EasyCut™ at your employees' side at all times.

It's nearly impossible to misplace - one of our largest customers who purchases 100,000 EasyCut cutters a month reported a reduction in cutter purchases of over 35% over the past year due to the holster and lanyard feature.

Because only the blade needs to be replaced—the EasyCut™ is reusable time after time.

The typical competitor's blade lasts for about 500 feet of cutting. The EasyCut blade lasts 3,000 feet saving you money on replacement blades!

In addition, both ends of the blade are usable, so you get twice the cutting power.
