FOODSERVICE RACKS
BUYING GUIDE

SEAMLESS **ORGANIZATION**

From storage and organization to transport and service, reliable foodservice racks help keep your operation running smoothly. With this guide, you can easily review and choose the right rack for your products, space and workflow. In each section, you'll find helpful information about materials, sizes, features and more to help you make the right choice. Kratos foodservice racks are durable, versatile solutions designed to maximize storage, improve organization and support efficient workflows. Built for the demands of commercial foodservice, Kratos racks deliver dependable performance day after day.

NSF Certification for Restaurant Equipment

NSF is an independent organization that tests and certifies products for public health and safety.

NSF-certified ensures equipment is free of contaminants, banned substances, and hazardous materials.

MATERIAL

Aluminum

Kratos racks are constructed of corrosion resistant commercial grade aluminum, delivering the perfect balance of strength and versatility. Designed for long lasting use in busy commercial foodservice environments.

BUILD TYPES

Knocked Down

A storage rack designed to be shipped and stored in separate components that can be easily assembled. Provides up front savings on shipping costs.

Assembly required.

Welded

Heavy-duty all welded racks ship fully assembled. Engineered for exceptional strength and stability, welded racks offer greater load capacity and long-term durability versus knocked down alternatives.

RACK OPTIONS

Choosing the Right Features

Foodservice racks come in a variety of options to fit your space, products and workflow. Choose from stationary, mobile, enclosed, reach-in, side-load and end-load designs, plus nesting, worktop and slide spacing options to create the right storage solution for your operation.

Stationary

Racks stay securely in place on the floor or tabletop for added stability and support.

Mobile

Equipped with (4) casters for easy mobility, with (2) locking casters for stability when in place.

Enclosed

Used to protect, store, and transport baked goods in a sanitary and efficient way, while reducing contamination risks.

Reach-In

Designed to optimize storage in commercial reach-in refrigerators and freezers.

End Load

Standard front-to-back loading of pans.

Side Load

Pans are loaded from the side allowing for quicker and easier access

Nesting

Angled design allows for racks to fit comfortably together when not in use, saving precious storage space.

Worktop

Some half-size racks feature a work surface for added prep space.

Slide Spacing

Generally racks either come 2", 3", or 5" between slides giving options depending on the application.
