

# WASTE STREAM SOLUTIONS

Rubbermaid Commercial Products' newest innovations offer the most adaptable recycling solution for front of house, back of house, and movement throughout facilities. Thanks to a combination of a wide depth and breadth of recycling products, implementing a complete recycling solution is now easier than ever.

Once a target facility has been identified, we have created four user-friendly tools that will help guide you through the selling process:

- 1** Initiate discussion about recycling and the fact that a recycling system can reduce a facility's waste hauling costs utilizing the **RCP Recycling ROI Tool**.
  - Key fact: the average facility can save up to 30% on its hauling costs by recycling
  - Utilize the **RCP Recycling Implementation Guide** to discuss key steps required to implement an effective recycling program
- 2** Utilize the **RCP Waste Audit Guide** as a tool to discuss how a facility can reach its diversion goals.
- 3** Review the **RCP State Legislation Summaries** to highlight relevant recycling legislation in a facility's state or city.
- 4** To help ensure the facility chooses the right assortment for their building, the **RCP Recycling Solutions Catalog** should be shared. In this catalog you will find the full RCP recycling product assortment, which will help to make the best choices for each facility.
