

SOCIAL DISTANCING FLOOR GRAPHIC INSTALLATION

Before you set out to install the floor graphics, you need to be sure the vinyl will stick to the flooring material. Generally, floor graphics can be applied to waxed vinyl, sealed concrete, marble, ceramic tile, sealed wood and Terrazo. The floor surface must be secure and in good condition. Do not install floor graphics over loose or uneven tile. The floor surface to which the graphic is applied should also be well secured, and free from cracks and chips, and missing and/or loose grout. The floor surface should also be free of silicone, as the presence of silicone will inhibit anchorage of the graphic to the floor surface.

It's also important to note that the floor graphic will become slippery when wet.

STEP 1:
Thoroughly clean surface before installing the floor decal.

STEP 2:
Measure and center your decal in desired area.

STEP 3:
After measuring, tape the floor decal in place (making sure it looks centered).

STEP 4:
Remove part of the decal from backing paper.

STEP 5:
Cut strip of the paper with scissors.

STEP 6:
Squeegee down part of the decal in a vertical motion.

STEP 7:
Remove the rest of backing paper.

STEP 8:
Continue to squeegee the rest of the floor sticker.
