

The DOMINO Quad Cold Display with Acrylic Domed Covers & NSF coated aluminum trays is a SMART display.

1A19431NSF ●

DOMINO is a completely new concept in modular buffet systems. The DOMINO Quad Cold Display with Acrylic Domed Covers includes four individual displays. They can be used in conjunction with one another as a display set or they can be used individually. This display includes four stands, eight ice packs, four ice pack pans, two full size NSF coated aluminum trays, four 1/2 size NSF approved aluminum trays and two acrylic domed covers. The acrylic domed covers open to 90° for serving versatility. All DOMINO components share legs so you can weave together pieces to build it your way. Simply put, DOMINO makes it fun again!

The DOMINO system connects like Legos, but is made of solid stainless steel. Mix it, match it, change it; build it high or keep it low. It is simply the most versatile, easy to use system ever made. **All food surfaces are NSF approved!**

All components can be connected to each other. Shared legs slide into each other quickly and easily. Add a leg for extra height, remove a leg for a lower profile. You are only limited by your imagination.

Build a beautiful breakfast buffet this morning. Add some different components and you have a lunch buffet. Add a couple more components and you're ready for dinner. What would you like to see? Decide and make it so. No matter what, your choice will be **SMART!**
