make it worth your wait

You already have to wait, you might as well get what you really want!

We are still in unprecedented times. Between freight delays, workforce shortages, and other supply constraints it seems like all we do is wait. **So why not put that time to good use?!**

"Don't Compromise...Customize."

Whether you need to make a minor adjustment, such as different runner spacing or a size adjustment, or a specialized rack to accommodate a special pan or perform a special function— Our New Age team is ready to help.

Not only are New Age Products made in the USA, they are made under one roof. We extrude, cut, shape, weld and assemble our products right here at the plant in Norton, Kansas. This allows us control over the entire manufacturing process, giving you the freedom to make changes and design a product made for your exact needs.

Let's Get Started

Requesting a custom product is easy – A few questions, plus your contact information, and you are on your way!

- Internal tie rods and a tubular skeleton provide additional strength and durability.
- Tubular supports and inset plates are welded to the solid sheet base; the plates are threaded for bolting casters onto the cabinet, no holes in the framework or base!

- Stainless steel hinges allow the door to open 270 degrees and the flip-down latch clinches the door closed. Available door latch holds the door open and out of the way for efficient loading.

Ordering Instructions

- Determine the number of shelving sections in the shelving run – Find type, number, and depth of shelves required per section.
- Horizontal braces are not needed.
- Shelving sections 3', 4', and 5' long require two uprights, one left and one right.
- Run lengths over 5' require a left and right upright on the ends and a common upright between each section. (as shown in the picture above).

Note

- Upright height (length) is determined by ceiling height.
- Actual shelf depth from the wall to the front of the shelf is 3" more than the listed shelf depth.
- The actual shelving run length is found by adding 6½" to the sum of the shelf lengths in a shelving run — a typical 7' shelving run which uses a 36" shelf length and a 48" shelf length is actually 90½" long (7' 6½").
